EDUCATION

Indian Institute of Technology (B.H.U), Varanasi
Bachelor of Technology (B.Tech)

July 2016 – July 2020

SKILLS

Backend & Distributed Systems: Spring Boot, Dropwizard, Kafka, Workflow Engines, Java, Python
Cloud & Data: AWS, Docker, Kubernetes, CI/CD, MySQL, ELK
AI & LLM Systems: RAG, Multi-Agent Systems, Milvus, Claude Code, Cursor, Windsurf

EXPERIENCE

Walmart

May 2024 – Present

Software Engineer 3

- Led performance optimization of core **Start and Update Workflow APIs**, reducing **P95 latency from ~200ms to ~130ms** and scaling the platform to **~1500 synchronous workflow executions per second** through database query optimizations and infrastructure tuning.
- Designed and implemented a **multi-tenant onboarding architecture** supporting multiple teams and **multiple workflow engines per tenant** within a shared cluster, defining data models, relationships, and lifecycle management.
- Owned the **end-to-end integration of Orkes Workflow Engine**, enabling workflow-driven orchestration across backend and AI-powered systems, including SDK integration, configuration management, and runtime interoperability.
- Built and owned a **production-grade AI platform**, including RAG pipelines (Docling, pdfplumber, Vision LLMs), **hybrid retrieval using Milvus (semantic + BM25 with RRF and cross-encoder re-ranking)**, and LLM-based response generation with evaluation and observability pipelines.
- Designed and implemented a **stateful multi-agent orchestration system** with task decomposition, parallel execution, dynamic model selection, and **persisted workflow state for deterministic pause/resume**, enabling human-in-the-loop code generation and review cycles.
- Built internal **AI-powered developer tooling** and introduced **spec-driven development workflows using LLMs**, improving engineering velocity and consistency across feature development.
- Mentored a junior engineer while owning services end-to-end within a **6-member backend team**, contributing to design reviews and technical decisions.

Rakuten

May 2023 – May 2024

Software Engineer 2

- Designed high-volume payment batch processing systems and APIs, enabling seamless third-party integrations across multiple Rakuten brands.
- Built a Java-based mock server framework to simulate external payment providers, improving integration test coverage and reliability.

Podeum

July 2022 – May 2023

Founding Engineer

- Built and scaled backend services from scratch using Java, supporting growth from **0 to ~10,000 daily active users**.
- Designed and implemented core platform systems including authentication, virtual economy, in-app purchases, and real-time live score feeds.

Morgan Stanley, Bangalore

Oct 2020 – June 2022

Software Developer

- Developed and maintained Big Data applications and set up CI/CD pipelines with Jenkins and Sonar, improving code quality and deployment workflows.
